### PROJECT OVERVIEW

The athletic staff at Northland Christian School planned an upgrade of the weight and locker rooms to provide an improved environment for its student athletes.

The existing concrete floors were a combination of old, tattered carpet and flaking paint. The concrete had numerous divots caused by dropped weights. In addition, the concrete surface had to be mechanically blasted and the carpet adhesive totally removed.

The objective was to provide a floor that could withstand abuse, be non-slip in the locker room and aesthetically pleasing.

### KEY CONSIDERATIONS

**Repair:** RezRok® 105 an epoxy patching compound was applied to fill cracks and spalls due to abuse caused by dropped weights.

**Decorative Surface:** TuffRez® 211 Black, a semiflexible epoxy coating was allowed to self-level to fill tiny divots and provide a 20 mil intermediate basecoat. A topcoat of TuffRez® 235 Aliphatic Polyurethane Coating was then rolled onto the floor to provide a high gloss, abrasion resistant finish. The schools mascot logo was added for aesthetics.

The coaching staff has been elated with the results!

### SYSTEM PRODUCTS

- **PolySpec® 300 EX**  
Primer
- **RezRok® 105**  
Epoxy Patching Compound
- **TuffRez® 211**  
Epoxy Semi-Flexible Coating
- **TuffRez® 235**  
Polyurethane Coating | High Gloss
- **PolySpec® Ultra**  
Urethane Enamel Coating | High Gloss (for logo)
